### **DETAILED ACTION**

## Information Disclosure Statement

1. The information disclosure statement filed ON 1/5/2006 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. An English Language Abstract for KR 2001-0040256 as recited in page 2 of the IDS was not received (Abstract of WO 9917431 was received instead). It has been placed in the application file, but the information referred to therein has not been considered.

#### Remarks

2. In view of amendments, the Examiner withdraws the objections to the drawings, the rejections under 35 USC 112, second paragraph to claims 1-9. The addition of claims 10-14 has been acknowledged.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Leibovich in view of Klode (WO 01/45237).

Regarding claim 1, Leibovich discloses a line start reluctance synchronous motor comprising: a single phase stator arranged at an inner circumferential surface of a

motor body and on which a main coil and a sub coil are wound (claim 23); and a cage rotor provided with a rotation shaft at a center portion. Leibovich fails to show a magnet unit free-rotatably arranged along an inner circumferential surface of the stator in order to maintain an air gap with the stator.

However, Klode disclose a magnet unit (40 in Fig. 2) free-rotatably arranged along an inner circumferential surface of the stator in order to maintain an air gap with the stator for the purpose of reducing the rotational inertia of an electric motor.

Since Leibovich and Klode are in the same field of endeavor, the purpose disclosed by Klode would have been recognized in the pertinent art of Leibovich.

It would have been obvious at the time the invention was made to a person having an ordinary skill in the art to modify Leibovich by using a magnet unit free-rotatably arranged along an inner circumferential surface of the stator in order to maintain an air gap with the stator as taught by Klode for the purpose of reducing the rotational inertia of an electric motor.

# Allowable Subject Matter

- 4. Claims 2-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 5. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 7, the prior art of record does not show a line start reluctance synchronous motor as described in claim 7 including a number of poles; a plurality of

cage bars at a peripheral portion thereof; a plurality of first magnetic barriers located at an outer circumferential surface of the cage rotor, the number of the first magnetic barriers being equal to the number of poles of the cage rotor: and a plurality of second magnetic barriers located at an inner side surface of the cage rotor, the number of the second magnetic barriers being equal to the number of poles of the cage rotor.

Regarding claim 14, the prior art of record does not show a line start reluctance synchronous motor as described in claim 14 including a number of poles; a plurality of cage bars at a peripheral portion thereof; and a plurality of magnetic barriers, the number of the magnetic barriers being equal to the number of poles of the cage rotor.

#### Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hanh N Nguyen whose telephone number is (571) 272-2031. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner 's supervisor, Darren Schuberg, can be reached on (571) 272-2044. The fax phone numbers for the organization where this application or proceeding is assigned are (571) 273-8300 for regular communications and (571) 273-8300 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose lelephone number is (703) 308-

1782.
